

Ceramic Filter Disk, 40 Micron

Brand:
Product Code: 170-51
Availability: 559
Lead Time: 30

Description

In the oilfield, ceramic filters are used as a replacement for filter paper in the HTHP filtration test. Available in a wide range of pore throat sizes, ceramic filters enable the operator to perform filtration tests at similar porosities to that of the formations being drilled, a big advantage over filter paper. Also, ceramic filters, unlike paper, have depth (usually $\frac{1}{4}$ "), so invasion and return permeability studies may be performed and bridging characteristics of drilling and drill-in fluids may be analyzed.

Specifications

- Diameter: 2.5" (6.35 cm)
- Thickness: .25" (.635 cm)
- Mean Pore Throat: 40 μ m
- Permeability: 8 D
